## Objective:

Disruptive innovation in chemical world is a process to turn cutting-edge science into novel products with superior features that they create vast new markets, which unsettles established products and technology. The world is potentially on the brink of an age of new powerful materials & processes, ushered in by innovation in the chemical world. Plastics & polymers, derived from hydrocarbons, the Nano-scale revolution - the remarkable discoveries of two-dimensional, single atom materials such as Graphene from Carbon & Silicene from Silicon, has resulted in new materials that are lighter, stronger, more malleable, and more temperature-resistant than any chemical products in history and are innovations. However, the wave of disruptions introduce new undesirable environmental, health and social side affects therefore such technology must resolve social uncertainties too.

Researchers being one of the stakeholders in disruptive innovations, need continuous efforts to assimilate and share new knowledge for societal benefits. Two days National Conference has been organized to take up objective & insight by sharing knowledge through researches in various fields with varied scope.

## Scope :

The scope of the conference is as follows:

- Nano Chemistry
- Material Chemistry
- Structural Biology
- Molecular Biology
- Application of software in chemical world
- Environmental Issues & Health Effects
- Atmospheric Modeling studies
- Spectroscopy
- Other relevant topics and researches
